

Reduce your risk, protect your patients

After your employees, your network is your greatest vulnerability

Most healthcare organizations have networks that connect their devices to each other and to the Internet. They may be hardwired, wireless, or both. Networks enable us to communicate—and to store, access and update medical data.

The widespread use of portable devices such as smartphones, laptops and tablets puts your network at risk. Other risks come from:

- Negligent or untrained staff
- Weak and unenforced password policies
- Phishing email with links to bad websites that deliver malware and viruses
- Staff or undetected intruders pilfering medical data, DOBs and SSNs to sell.

Health information is worth far more than credit card information

Stolen patient health data can be sold on the black market for over \$360 per record—far more than any other data from any other industry, according to an article published by the InfoSec Institute.

You have a legal and moral obligation to protect your patients' information from loss, theft and unauthorized access. Do you know how well you're fulfilling that obligation?

When poor security results in a data breach

Inadequate network security can result in data loss or theft—both HIPAA violations. A network security overview is a vital step in reducing the risk of fines imposed by the HHS Office for Civil Rights along with OCR Corrective Action Plans that can take your practice years to complete.

Health Flash: Your network security overview will be quick, painless, and non-invasive

Designed to help you reduce network vulnerabilities to protect your ePHI, our security overview will look for a wide array of risks and spotlight the gaps in your specific network security.

A clear summary report will outline the actions you can take to mitigate those risks and prevent HIPAA violations that can lead to costly data breaches.

- When was the last time you checked to see if your wireless network was leaking data?
- When was the last time you updated your software and security patches?

If you can't remember, it's been too long!

SCHEDULE YOUR OVERVIEW TODAY

As the #1 provider of HIPAA compliance services in the Southeast, JDL HealthTech provides IT solutions that are HIPAA-compliant, including our network security overview. We are a HIPAA-compliant Business Associate and will sign your Agreement.

Call us today for a quote and scheduling. Every day you wait is an unnecessary risk to your patients and their PHI.
